

AAON Breaks Ground on New Engineering Research and Development Lab

AAON, Inc. breaks ground on new engineering research and development laboratory at the Tulsa manufacturing facility. The three-story 75,000 square foot facility will be both an acoustical and a performance measuring laboratory. The new facility will consist of five psychrometric chambers allowing AAON to meet and maintain AHRI and DOE certification.

What makes AAON stand apart?

- It will be the only laboratory in the world able to measure the supply, return, and ambient sound under actual load conditions.
- The performance lab will measure the efficiency by which energy is converted into heating, cooling, or air movement.
- A witness test area will also allow customers the opportunity to view product testing.

The new lab is expected to be completed by the end of 2018.
