

The purpose of Jacco & Associates is to help our clients solve their problems in the most economical way, at all times optimizing the owning experience. Part of this experience is the continual maintenance of your HVAC systems to insure proper operation, maintain system efficiencies and increase your system's life expectancy.

## Humidifier Maintenance

The humidifiers efficiency on bringing moisture into the environment at a comfortable level relies on the humidifier parts performance. It is vital to know therefore the proper cleaning and maintenance needed for the humidifier.

The humidifier parts need to be frequently cleaned and maintained in excellent conditions in order to effectively serve its purpose. It is important to observe the standard procedures of properly maintaining the good condition of the humidifier parts which are generally responsible for the efficiency and reliability of functions served by the humidifier.

Maintaining the environments condition on its proper humidity level is very important basically because of health concerns. Too much moisture in air is detrimental to health condition due to the fact that cooler environment beyond 50% of humidity level can harbor growth of dust mites, bacteria, and other culprits that cause respiratory allergic reactions such as asthma and rhinitis. Fungi and molds also feel comfortable to thrive in cool environment.

When the air becomes too dry usually below 30% of the humidity level, it can also cause numerous discomforts and symptoms that are relatively unhealthy. It imposes risk to your body to feel completely dry such as experiencing dry throat and mouth, itchy eyes due to dry eyes and including dry, itchy skin. It is therefore important to maintain the humidity level on the surrounding environment through the help of a humidifier.

One of the desirable features that should be included with the humidifier is the hygrometer which can accurately gauge the humidity level of the environment. This will give you control over the humidity level of the humidifier. Most humidifiers have a digital thermostat control adding convenience when using the humidifier.

Learn to consult the user manual that comes with the humidifier. It contains important information and tips that could guide you on the proper cleaning and maintenance needed with the humidifier specific to your facility.
